

## **ABSTRACT**

A display apparatus includes a display body having a display part, a supporting bracket attached to a wall and a angle control part connected to the supporting bracket to adjust a tilting angle of the display body. The display apparatus also includes a driving part to drive the angle control part to adjust the tilting angle of the display body, an input part for a user to adjust the tilting angle, an OSD generating part to generate an OSD signal to control the tilting angle, and a controller to control the driving part so that a tilting angle adjusting menu is displayed based on the OSD signal generated by the OSD generating part according to the input part, so that the tilting angle of the display body is adjusted according to a selection based on the tilting angle adjusting menu. Thus, the display apparatus may control the tilting angle of the display body minutely and easily by the OSD.
